ABOUT THE CONFERENCE

Artificial intelligence & Pharma: What's next ?
Artificial Intelligence (AI) in Pharma refers to the use of automated algorithms to perform tasks which traditionally rely on human intelligence. Over the last 5 years, the use of AI in the Pharma & biotech industry has redefined how scientists develop new drugs, tackle disease & more.

Given the growing importance of AI for both academic & Pharma industry, we wanted to create a comprehensive report which helps every business leader understand the biggest breakthroughs in the biotech space which are assisted by the development of AI technologies. With this in mind, the scholastic approach & Pharma business is using AI to increase the success rates of new drugs while decreasing operational costs at the same time.
